Subject: FS Revised Section 2; Clarification on LWG Comment #8

Kristine,

An action item from our April 10, 2015 technical meeting on the draft Bioaccumulation Model Report was for the LWG to clarify its Comment #8 on EPA's revised Section 2 of the Feasibility Study does not call into question the validity of the bioaccumulation model. The LWG's Comment #8 focused on our concerns with EPA's approach for developing dioxin and furan PRGs in sediment that are unrelated to the validity of the bioaccumulation model. This is consistent with the LWG's April 23, 2015, response to EPA's response to Comment #8.

Please contact me if you have any questions.

Thanks,
Jim McKenna
